# Workshop – Landing Page

1. HTML, CSS and JavaScript Code

You are given the following **HTML** and **CSS** and your page should look like this *(without the slider)*:

You can use the skeleton and upgrade it with **jQuery plugins** of your choice. Here is what we suggest.

2. Slider Plugin

Sliders allow users to make selections from a range of values - so it is the perfect way to show our open courses. Sliders reflect a range of values along a bar, from which users may select a single value. There are many options to use a slider - you can write it by yourself or you can use plugins.

For the slider section you can use [Slick Slider](#). See how to integrate it in your project in the [Usage] section.

Add this https://kenwheeler.github.io/slick/slick/slick-theme.css into your css link to design the button
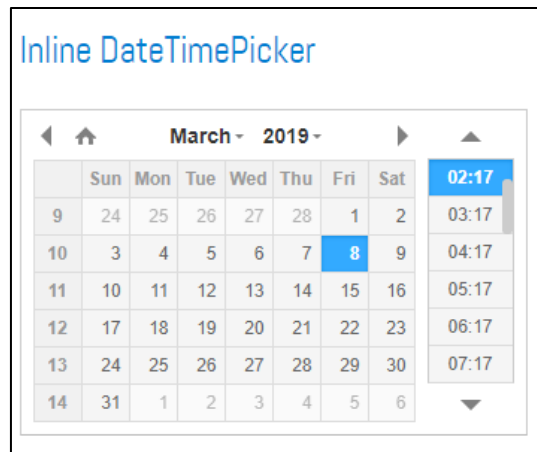

3. DateTimePicker Plugin

The **DateTimePicker** plugin handles both date and time. For the **[Time]** input filed in the form you can use the following plugin: https://xdsoft.net/jqplugins/datetimepicker/

Note: Use the inline version with the white theme and modify it if it's needed.

Add Some Functionality

You can add some validations in your form like the following:

- **Username validation:** A valid username **starts with a letter** and can only contain **letters**, **digits** and underscores "**_**". It cannot be **less than 3 or more than 25 symbols** long.
- **Lecturer validation:** Should be one of the lecturers' names.
- You should **not be able** to **send** the form **without filling** all the input fields.

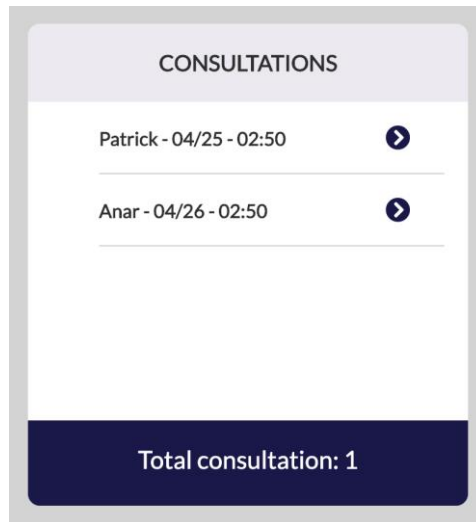

After you've successfully filled the form, a meeting should be created and displayed in the **[Consultations]** section in the following format:
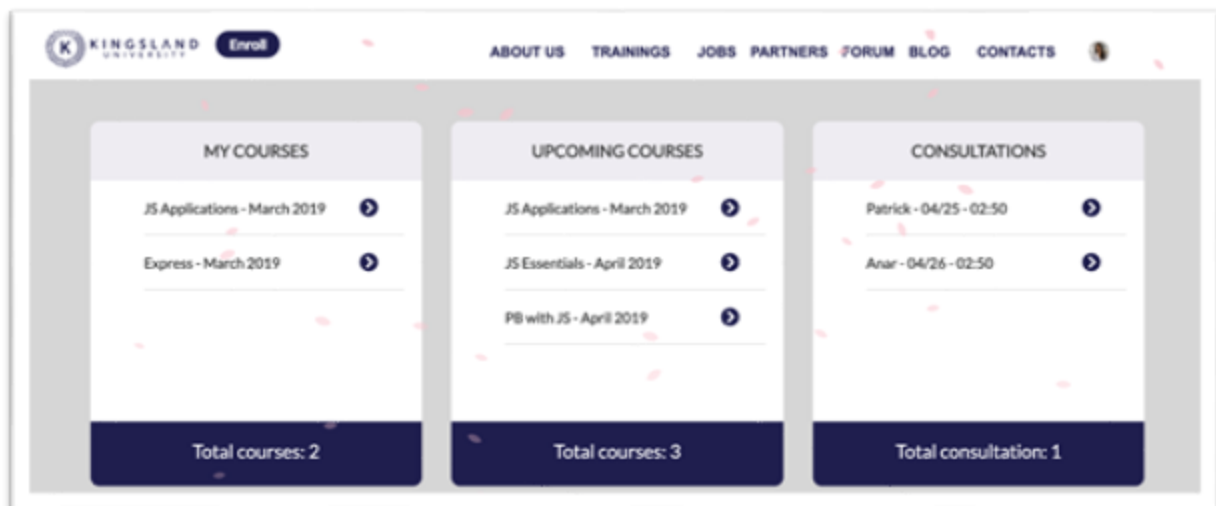

"{lecturerName} – {date} – {hour}"

With each added consultation, **increase** the **total consultations count**.

Petals Falling Animation

The winter is ~~coming~~ fading away and the snowflakes are gone. **Spring** is coming, which is why we will implement falling petals as an animation to our page. The falling petals are a symbol of **Autumn**, when petals fall, but let's not put too much thought into that.

You can use the following plugin: https://www.jqueryscript.net/animation/jQuery-Plugin-For-Sakura-Petals-Falling-Animation-Sakura.html

4. Notifications

Notify.js is a **jQuery** plugin which provides simple, yet fully customizable, notification functionality.
